## PART ONE – GAME DESCRIPTION

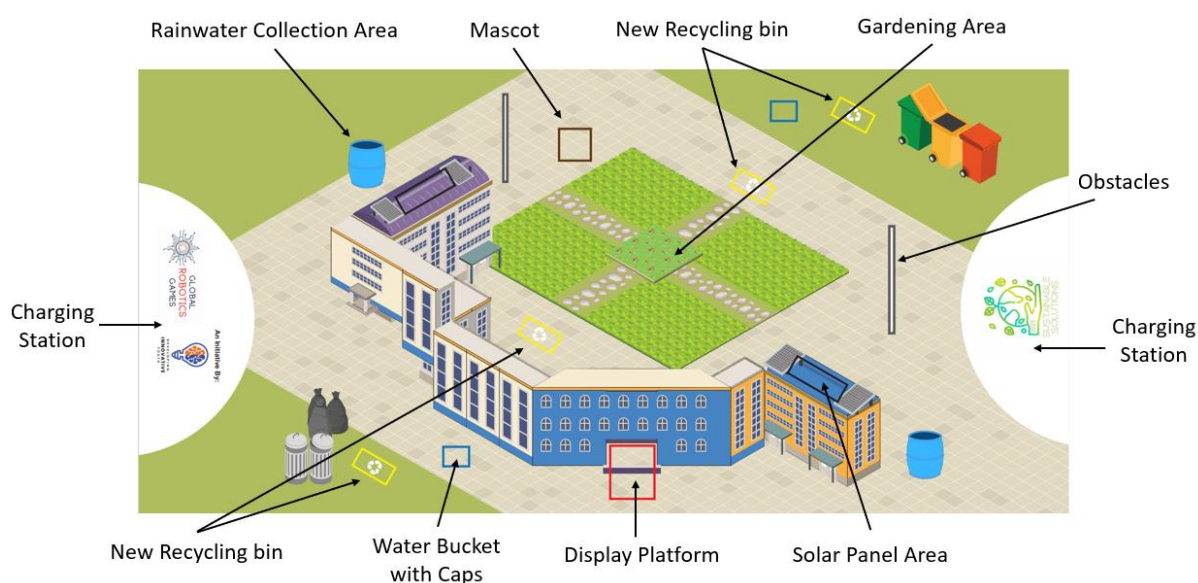

### 1. Introduction

To promote sustainability and its importance, it is crucial that sustainability efforts must be applied at the best place outside our homes, at school. Food security, proper water management, renewable energy sources and recycling are just some of the green practices that can be done in our schools. This is project Green School!

The robot takes on the task of planting edible seeds, collecting rainwater, activating solar panels, locating the recycling bin and even displaying the school's sustainability mascot! Remember the robot is operating in a school so it must be intelligent enough to avoid bumping into obstacles.

### 2. Game Field

The following graphic shows the game field with the different areas.

**For more information about the table and game mat specifications, please refer to NRC 2023 Regular Category General Rules.**

### 3. Sub-Category Game Rules

If there is any uncertainty during the robot attempt, the judge will make the final decision. The judge should decide in favour of the team if no clear decision is possible.

#### 3.1 Pre-run

- Robot and all its attachments and team mascot will be inspected by referees according to the requirements prior to quarantine.
- The Robot must be placed in the starting area so that the entire robot on the game mat is completely within the start area.
- Teams are allowed to make physical adjustments to the robot in the starting area before the start of the run.
- Teams are not allowed to enter data to a program by changing positions or orientation of the robot parts or to make any sensor calibrations of the robot.
- Team mascot will be placed in its designated position inside the playfield.

#### 3.2 Start of Robot Run

- Time begins when the judge gives the signal to start.
- Random elements will be determined and placed on their respective positions. Eg position of solar panel and new recycle bin.
- Each robot attempt is 2 minutes (120 seconds).

#### 3.3 During Robot Run

Robot must always start/re-start from any start area after the autonomous mission.

During non-autonomous missions, robot must on its own capacity return and be completely inside any start area.

Teams are allowed the following only when their robot is **completely within any start area**:

- To swap between autonomous and non-autonomous mode.
- To change the location of the starting point of the robot to any start area.
- To change and select the program file that they would like to execute to complete the mission.
- To change the robot arm attachments, sensors and/or motors at the start area.

Teams are not allowed:

- To touch the robot when the robot is moving inside the playfield area.
- Teams are not allowed to bring mission elements back into the start/charging area to be manipulated for scoring purposes.
- To reprogram and enter data into their robot during robot run.
- Teams are not allowed to use additional props not part of the robot to be left inside the playfield or be attached to mission/playfield elements.
- When in autonomous mode, to control the robot using any form of remote or wireless control.

### 3.4 Ending of Robot Run

A robot attempt will end if...

- the robot attempt time (2 minutes) has ended.
- the robot has completely left the game table.
- The robot has completely stopped and unable to return to any start and hence unable to continue and attempt other missions.
- the robot or the team violated rules or regulations.
- a team member shouts “STOP” and robot does not move anymore. If the robot is still moving, the robot attempt will only end once the robot stops by itself or is stopped by the team or judge.

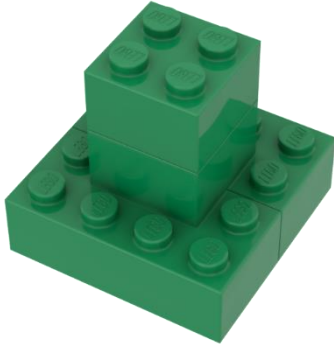

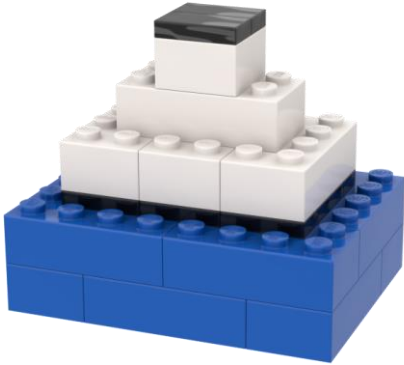

Once the robot attempt has ended, time is stopped, and the judge scores the attempt. The scores are noted on a scoring sheet (on paper or digital), the team need to sign off the scores (on paper or digital signature/checkbox). Once the score is signed off no further complaint is possible.

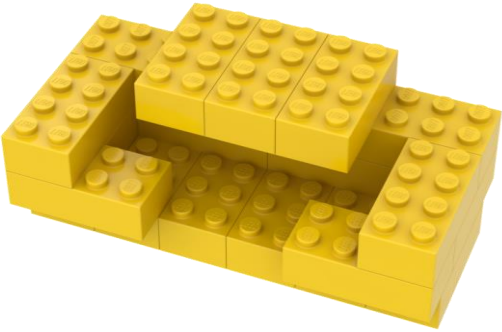

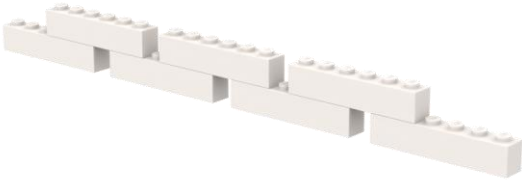

If a team does not want to sign off after a certain period, the judge can decide to disqualify the team for this round. It is not allowed for a team coach joins the discussion with judges on the scoring of the run. Video or photo proofs will not be accepted. [OBJ]

If a team finishes an attempt without having solved a (partial) task that yields positive points, the time of that run will be set at 120 seconds.

The ranking of teams depends on the overall tournament format. For example, the best attempt out of two rounds could be used and if competing teams have the same points, the ranking is decided by the record of time.

## 4. Game Objects, Positioning, Randomization

<p><b>3 Edible Seeds</b></p> <p>There will be a total of three edible seeds. These edible seeds will begin with your robot at the start.</p>	
<p><b>2 Water Buckets with Caps</b></p> <p>There are 2 water buckets with caps placed in the 2 blue rectangles on the playfield.</p>	
<p><b>1 Solar Panel</b></p> <p>There is one solar panel placed inside one of two black rectangles on the playfield.</p>	
<p><b>1 Display Platform</b></p> <p>There will be 1 display platform placed in the parade square of the school.</p>	

<p><b>1 New Recycling Bin</b></p> <p>There will be 1 new recycling bin placed randomly in one of the four yellow rectangles in the playfield.</p>	
<p><b>2 Obstacles</b></p> <p>There will be 2 obstacles placed in the 2 rectangles on the playfield.</p>	

## 5. Robot Challenge

<p>For a better understanding, the missions will be explained in multiple sections.  <b>The team can decide in which order they will do the missions.</b></p>
<p>Scoring for each mission will either be:          Final State (scoring is done when the Robot Attempt ends)          or In State (scoring is done during the Robot Attempt i.e. Robot is moving).</p>

### 5.1 Plant edible seeds in the school garden

The edible seeds will begin with your robot in the starting area. Your task is to transport and plant the edible seeds in the school garden. Your mission will be considered successful if your edible seeds are completely in the gardening area (defined as the centre green square surrounded by the 4 pavement). Teams are not allowed to combine the edible seeds props via the Lego connection system for easier transport.

Final State	Points (Each)
Edible seed is completely in the gardening area	10
Edible seed is partially in the gardening area	5

## 5.2 Collect rainwater using water buckets

We can reuse the rainwater collected for other cleaning purposes. Your task is to collect the rainwater by transporting the water bucket into the rainwater collection area. Your mission will be considered successful if you have transported the water bucket to the collection area, then removed the bucket cover. The collection area is defined as the blue water bucket image on the playfield.

In State	Points (Each)
Water bucket is upright and completely in the rainwater collection area and the bucket cover is completely removed by the robot after placing within the collection area.	15
Water bucket is completely in the rainwater collection area in any position other than upright. or the bucket cover is touching any part of the water bucket.	10
Water bucket is completely in the rainwater collection area, but the bucket cover fell off during the transportation process.	5

## 5.3 Activate the solar panel

Activate the solar panel in the designated area. Your task is to transport the solar panel from one of the black rectangles to the other rectangle and activate the lever of the solar panel. The position of the solar panel will be randomised. Your mission will be considered successful if the grey panel is facing upwards and the solar panel is completely in the designated area.

Final State	Points (Each)
Solar panel is completely in the designated area and the grey panel is facing upwards.	30
Solar panel is partially in the designated area and the grey panel	20

is facing upwards.	
Solar panel is completely in the designated area, but grey panel is not facing upwards.	10

#### 5.4 Display your Sustainability Mascot

Create a Sustainable Mascot using LEGO® bricks with a maximum size of 8cm x 6.5cm x 8cm. Sustainability mascot must resemble a team mascot and must be built comprising of a few LEGO® bricks. A single LEGO® brick/part, not even a LEGO® man figure can be considered a team mascot. Your task is to display your mascot at the school's foyer. Your mission will be considered successful if your mascot is placed directly on the display platform, on the upright position and the platform is completely in the red box.

Final State	Points
Mascot is placed directly on top of the display platform, in the upright position and the platform is completely in the red box.	30
Mascot is placed directly on top of the display platform and the platform is completely in the red box, but the mascot is not on the upright position.	10
Mascot is placed directly on the display platform and the platform is partially in the red box.	

#### 5.5 Share the location of the new Recycling Bin

There is a new recycling bin placed somewhere in the school. Your task is to locate the new recycling bin by using an autonomous robot. Your robot will need to detect the recycling bin using either a colour sensor or motion sensor and to share its location by displaying an output using movement - do a 360° turn on the spot.

In State	Points
<b>Autonomous robot</b> detected the recycling bin using a sensor (colour sensor or motion sensor) and share its location by displaying an output using movement (doing a 360° turn on the spot).	40

#### 5.6 Avoid the Obstacles

Avoid hitting the obstacles within the playfield. More points will be awarded if the obstacles are left untouched. If obstacles are completely outside of the white boxes, no points will be awarded. Teams can only score these if the robot has scored some points in the other sections 5.1 – 5.5.

<b>Final State</b>	<b>Points (each)</b>
Obstacle remains completely in the white box untouched	15
Obstacles is partially touching outside of the black outline	5

### 5.7 Park the Robot

Return your robot to its charging station before the timer runs out. Your task is to park it within the designated charging station. Teams can only score these if the robot has scored some points in the other sections 5.1 – 5.5.

<b>Final State</b>	<b>Points</b>
Robot is completely in the charging station	10

## 6. Competition Scores

Game field score is up to a maximum of 200 points scored as described in the table below.

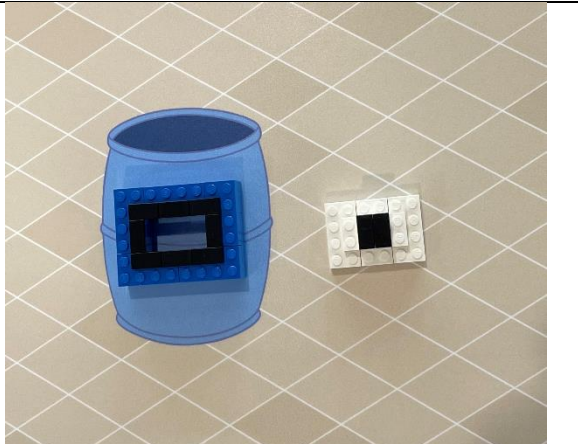

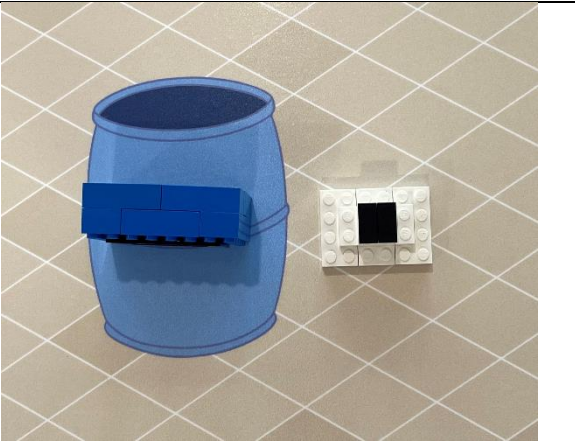

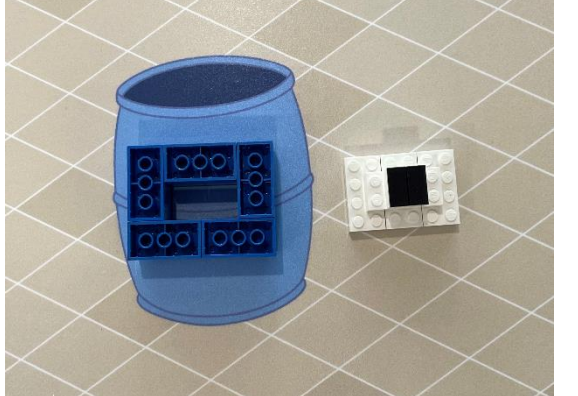

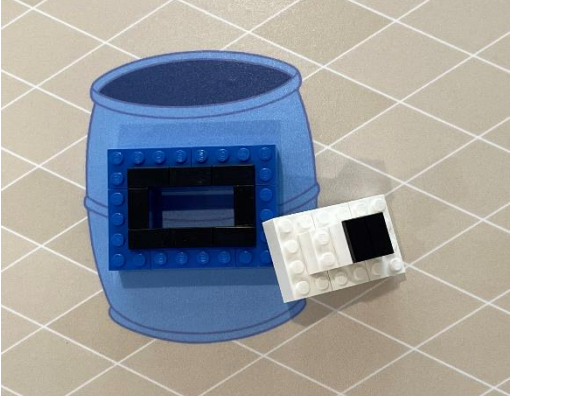

Tasks	Each	Total / Max
1. Plant the Edible Seeds in the School Garden		
Edible seed is completely in the gardening area	10	30
Edible seed is to partially in the gardening area	5	
2. Collect Rainwater using Water Bucket (In State)		
Water bucket is completely in the rainwater collection area and the bucket cover is completely removed	15	30
Water bucket is completely in the rainwater collection area with the bucket cover touching any part of the water bucket	10	
Water bucket is complete in the rainwater collection area, but the bucket cover fell off during the transportation process	5	
3. Activate the Solar Panel		
Solar panel is completely in the designated area and the grey panel is facing upwards	30	30
Solar panel is partially in the designated area and the grey panel is facing upwards	20	
Solar panel is completely in the designated area	10	
4. Display your Sustainable Mascot		
Mascot is placed directly on the display platform and the platform is completely in the red box	30	30
Mascot is placed directly on the display platform and the platform is partially in the red box	10	
5. Share the location of the New Recycling Bin (In State)		
Autonomous robot detected the recycling bin using a sensor (colour sensor or motion sensor) and share its location by displaying an output using movement	40	40
6. Avoid the Obstacles (only score if there are points given in 1 – 5)		
Obstacle is completely in the white box	15	30
Obstacles is partially touching outside of the black outline	5	
7. Park the Robot (only score if there are points given in 1 – 5)		
Robot is completely in the charging station	10	10
Maximum Score		200

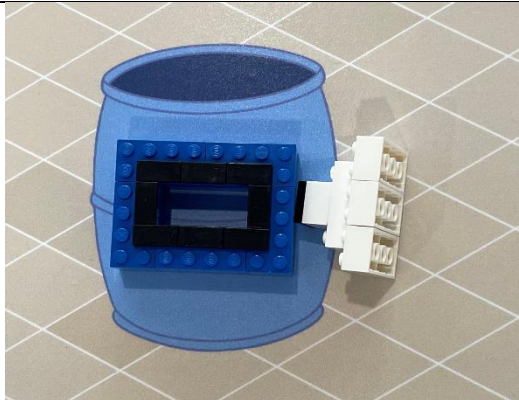

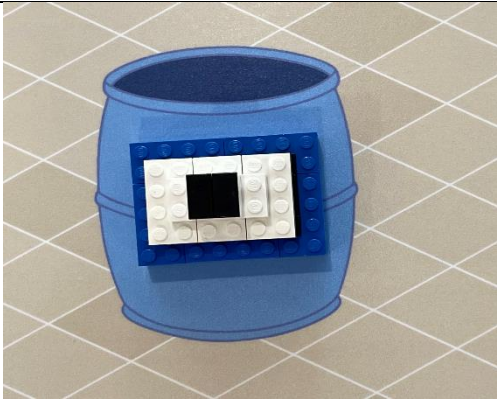

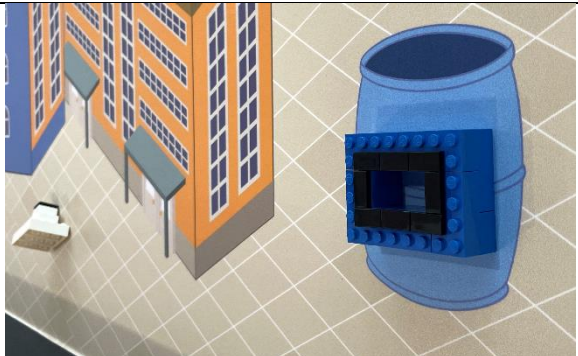

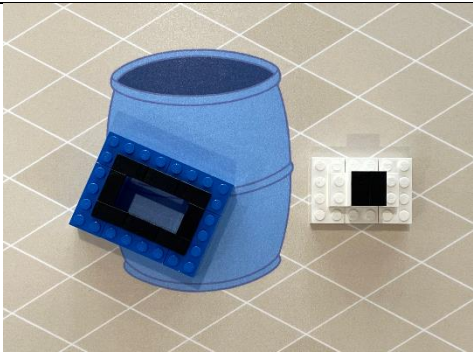

## 7. Scoring Interpretations

### 7.1 Plant edible seeds in the school garden

	
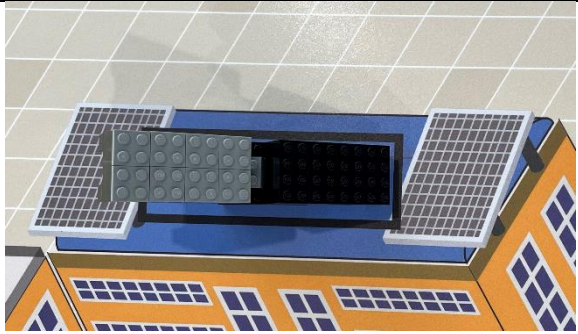

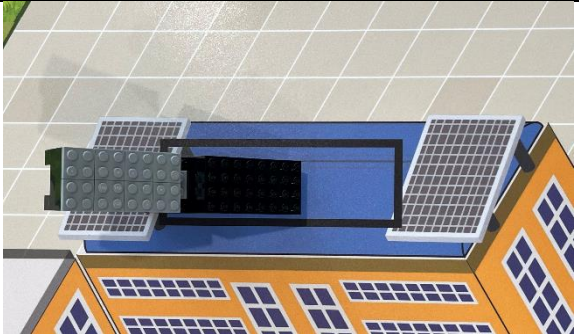

<p>Edible seed is completely in the gardening area – 10 points each</p>	<p>Edible seed is partially in the gardening area – 5 points each</p>

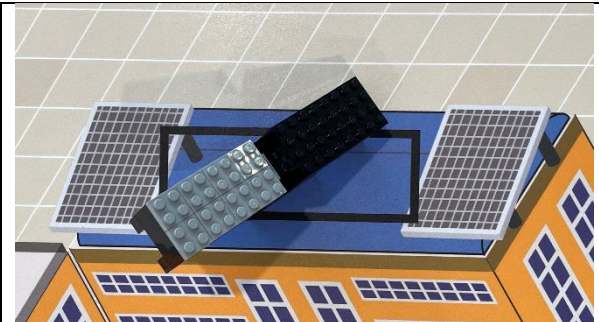

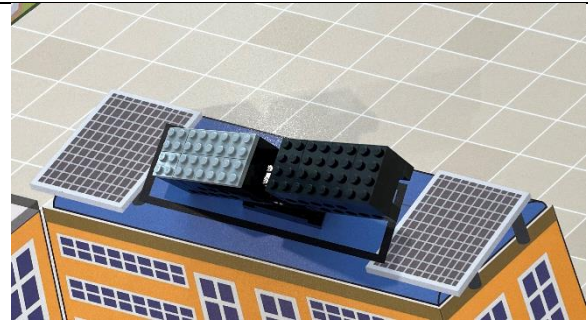

### 7.2 Collect rainwater using water buckets

	
<p>Water bucket is upright and completely in the rainwater collection area and the bucket cover is completely removed by the robot after placing within the collection area – 15 points</p>	<p>Water bucket is completely in the rainwater collection area in any position other than upright – 10 points</p>
	

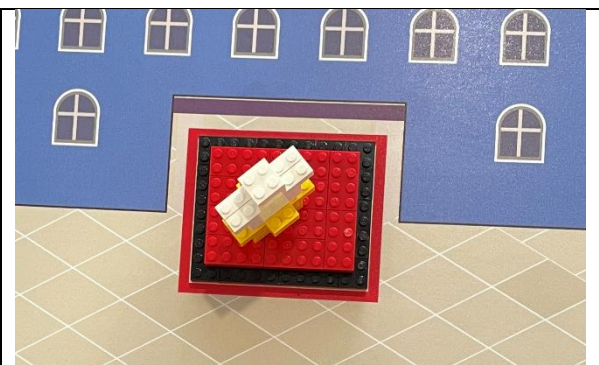

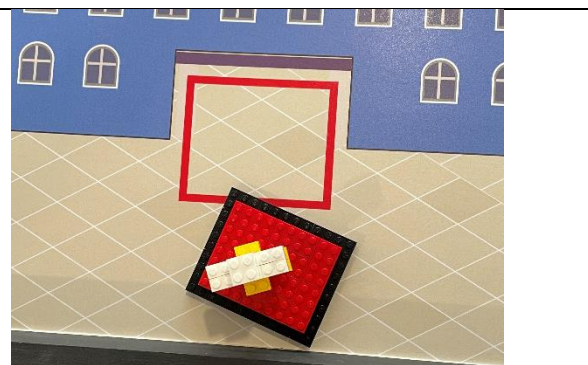

Water bucket is completely in the rainwater collection area in any position other than upright – 10 points	Water bucket is completely in the rainwater collection area and the bucket cover is touching any part of the water bucket – 10 points
	
Water bucket is completely in the rainwater collection area and the bucket cover is touching any part of the water bucket – 10 points	Water bucket is completely in the rainwater collection area and the bucket cover is touching any part of the water bucket – 10 points
	
Water bucket is completely in the rainwater collection area, but the bucket cover fell off during the transportation process – 5 points	Failed attempt – 0 points

### 7.3 Activate the solar panel

	
Solar panel is completely in the designated area and the grey panel is facing upwards – 30 points	Solar panel is partially in the designated area and the grey panel is facing upwards – 20 points

	
<p>Solar panel is partially in the designated area and the grey panel is facing upwards – 20 points</p>	<p>Solar panel is completely in the designated area, but grey panel is not facing upwards – 10 points</p>

#### 7.4 Display your Sustainability Mascot

	
<p>Mascot is placed directly on top of the display platform and the platform is completely in the red box – 30 points</p>	<p>Mascot is placed directly on the display platform and the platform is partially in the red box – 10 points</p>

#### 7.5 Avoid the Obstacles

	
<p>Obstacle remains completely in the box untouched – 15 points</p>	<p>Obstacle remains completely in the box – 15 points</p>

	
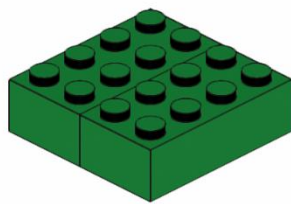

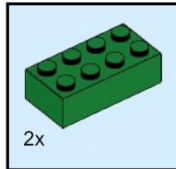

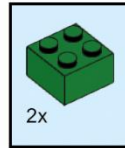

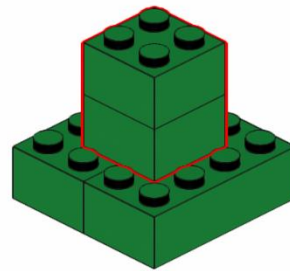

Obstacles is partially touching outside of the black outline – 5 points	Obstacles is partially touching outside of the black outline – 5 points

## 7.6 Park the Robot

	
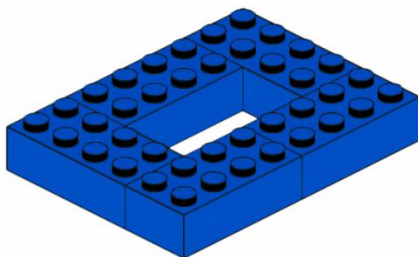

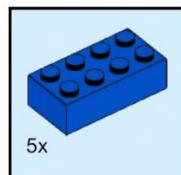

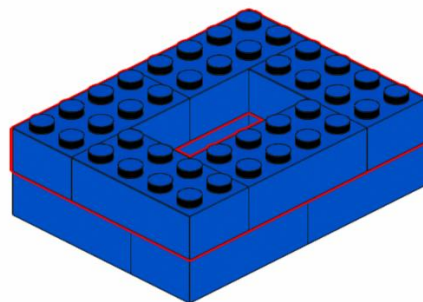

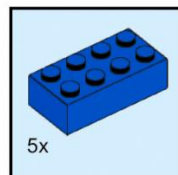

Robot is completely in the charging station – 10 points	Robot is completely in the charging station – 10 points
	
Failed attempt – 0 points	

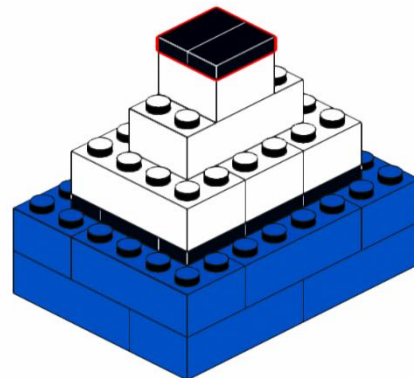

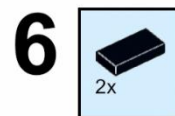

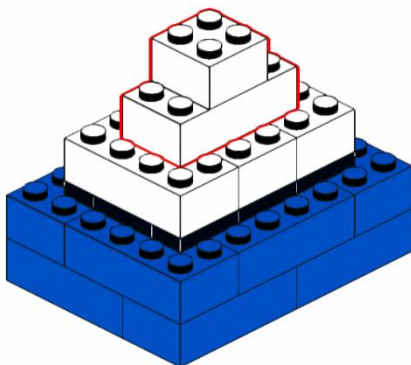

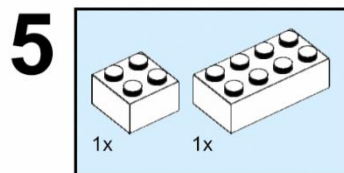

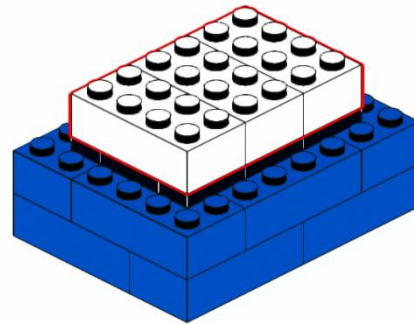

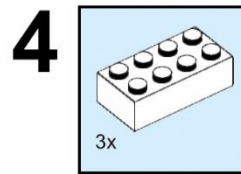

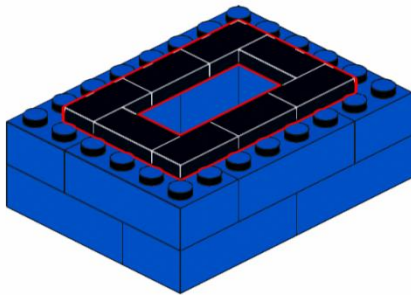

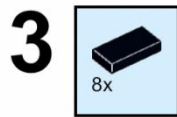

## 8. ASSEMBLY OF GAME OBJECTS

### 8.1 Edible Seeds (X3)

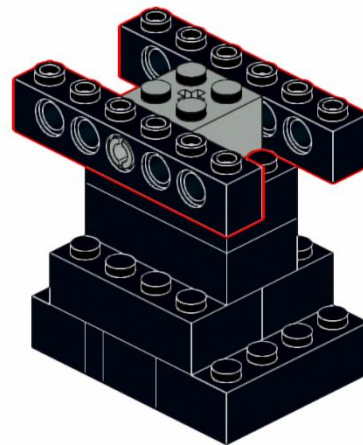

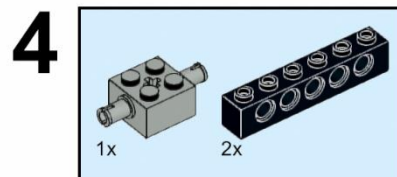

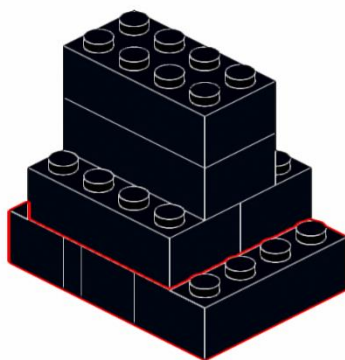

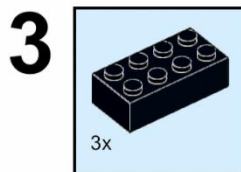

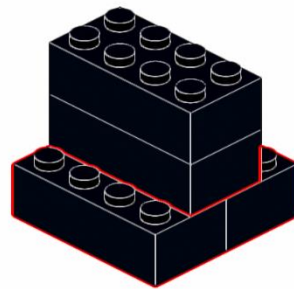

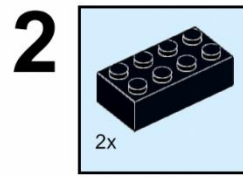

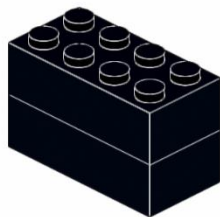

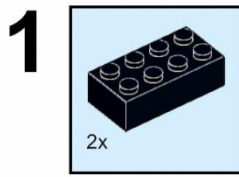

**1****2****x3**

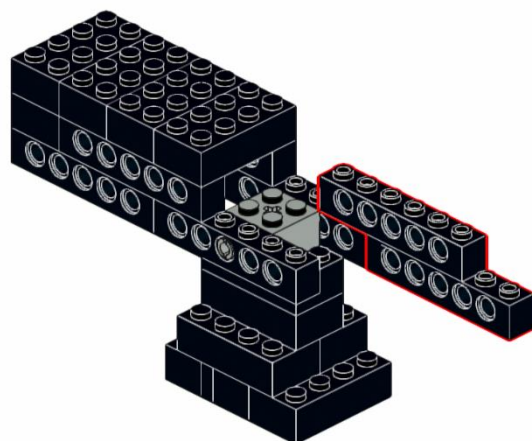

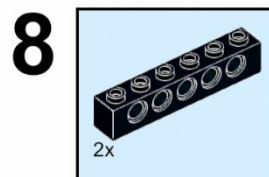

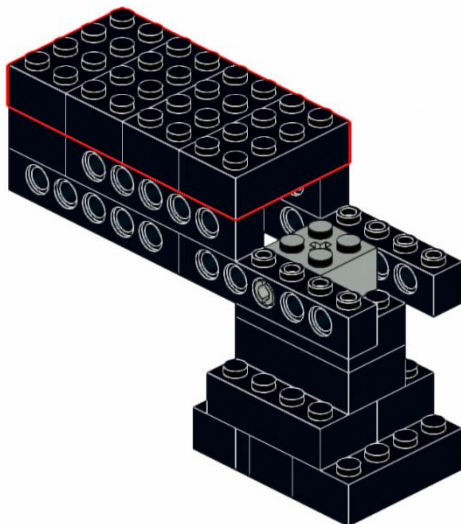

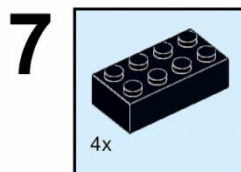

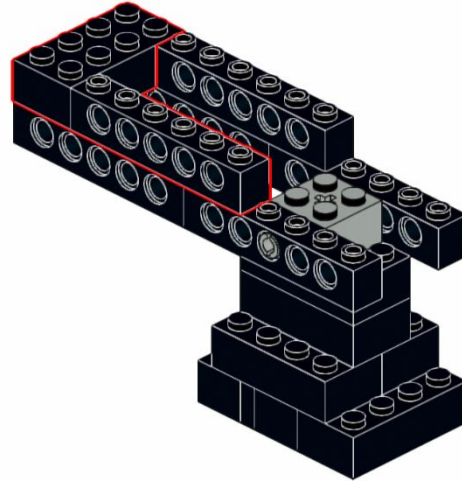

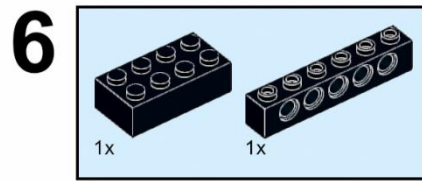

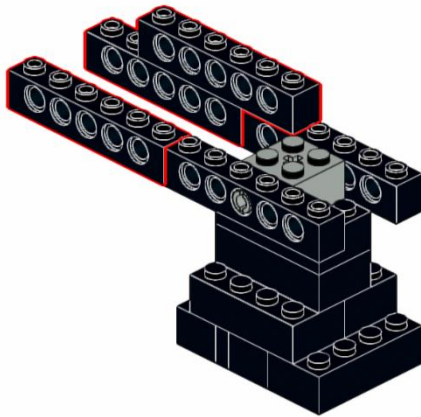

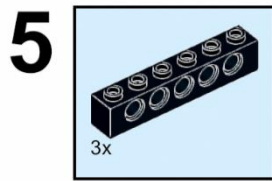

### 8.2 Water Bucket with Cap (X2)

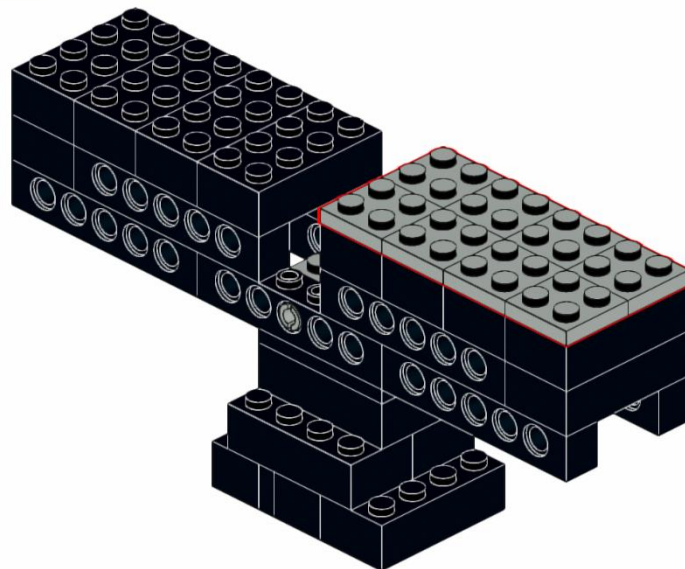

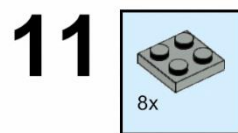

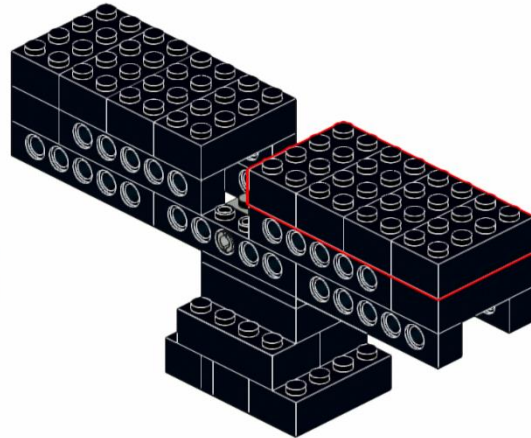

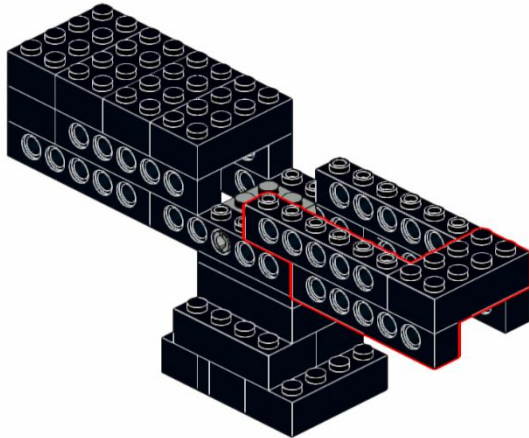

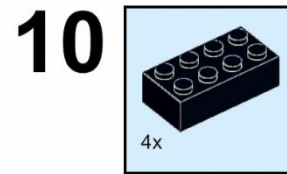

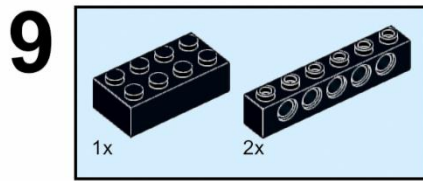

**1****2**

### 8.3 Solar Panel (X1)

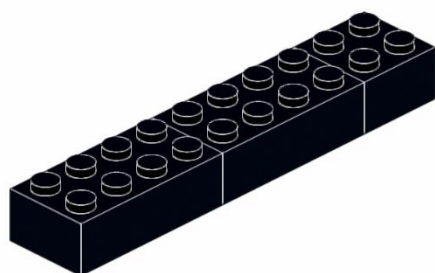

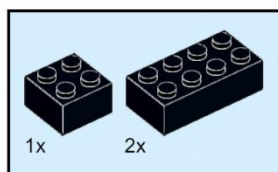

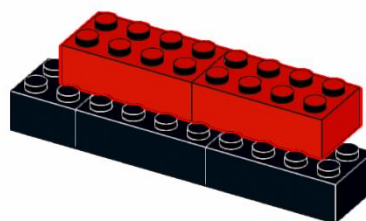

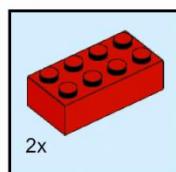

#### 8.4 Display Platform (X1)
